ProcurePilot

BRIEFING FOR THE MARKETING TEAM · NOVEMBER 2026

ProcurePilot: the idea and the product

Purchasing software built in Arabic, for multi-branch businesses in Egypt and Saudi Arabia. It reads supplier quotes, compares them fairly, keeps a person approving every purchase and counts a saving only once someone verifies it.

“The cheapest quote isn’t always the cheapest order.”

أرخص عرض سعر مش دايماً أرخص طلبية

From the approved demo video (v2.5). Real screens with synthetic data.

How to use this document. Read it once before you write, design or film anything about ProcurePilot (about 10 minutes). It explains the idea, how the product works, what we may say in public and what other material exists. Page 7 holds the rules.

1 · THE PROBLEM

Buying for several branches is still done by hand

A restaurant group with a few branches buys the same staples every week (rice, oil, sugar, flour) from several suppliers. Today that buying runs on WhatsApp, phone calls and Excel.

Quotes arrive everywhere

PDFs, phone photos and WhatsApp messages, mostly in Arabic. Someone copies every price into a spreadsheet by hand.

Prices are hard to compare

One supplier sells a 25 kg sack, another a 10 kg bag. One charges delivery, the other doesn't. The lowest number on the page isn't always the lowest bill.

Nobody checks the savings

"We saved money this month" is easy to say. Owners rarely see the evidence behind it.

The example we use in public

This is from the approved LinkedIn carousel (example numbers, not a customer's). Supplier A looks cheaper per kilo. Once the buyer orders 50 kg and A's delivery fee is added, Supplier B is cheaper by EGP 100.

Slides 2 to 4 of LinkedIn post A-01 (five slides in all).

Who feels it

Person	What they care about	What worries them
Owner or general manager (decides to buy)	Spend control and savings they can trust	Paying for savings that aren't real
Purchasing or operations manager (champions it)	Control over what every branch buys	Being blamed if a number is wrong
Buyer (uses it every day)	Less copying by hand, a fair comparison	Learning a new tool; how suppliers react
Branch manager (uses the phone app)	Ordering without paperwork	Waiting too long for approval

These roles are the product team's working assumptions. No customer interviews exist yet.

2 · THE IDEA

One place to read, compare, approve and prove

ProcurePilot takes the quotes suppliers already send, turns them into a fair comparison, and hands the decision to a person. After the order, it records what was really saved.

Positioning statement (approved 27 October 2026)

> For **multi-branch restaurant groups in Egypt and Saudi Arabia** whose suppliers send quotes in Arabic, as PDFs, photos and WhatsApp messages, **ProcurePilot** is **purchasing software built in Arabic** that reads those quotes, compares them on their true landed cost, and counts a saving only once someone on the team verifies it. Unlike WhatsApp threads and Excel sheets, it works in the team's own language and currency, and keeps a person approving every purchase.

Under review (not approved yet): widening the target from restaurants to any company in Egypt and Saudi Arabia that buys from many suppliers across several branches. Until it is approved, restaurants stay the public focus.

Three messages, in this order

1 · Built in Arabic

It reads your suppliers' Arabic quotes (PDFs, photos, files saved from WhatsApp) and your team works in an Arabic interface, in Egyptian pounds or Saudi riyals with each country's VAT.

The lead message

2 · Savings you can verify

A saving counts only once someone checks its evidence. A person approves every purchase, within the branch budget, also from the phone.

The second pillar

3 · Every price traced

Every price links back to the quote it came from. Offers are compared pack for pack with delivery fees, and one order can be split across suppliers when that costs less.

The supporting proof

Who it's for

- Restaurant groups with 2 or more branches (or one branch with a central kitchen or warehouse)
- Buying from 5 or more suppliers, at least weekly
- In Egypt first, and Saudi Arabia as the first Gulf market
- Teams that work in Arabic and get quotes in Arabic

Who it's not for (yet)

- Single outlets with no central purchasing
- Businesses that need a direct WhatsApp, ERP or most POS connections from day one
- Kuwait, Bahrain and Oman (their currencies aren't supported end to end)
- Anyone expecting the software to buy on its own

3 · HOW IT WORKS

From a request for quotation to a verified saving

Screens below come from the approved demo video (Egypt, Arabic) and the Saudi demo walkthrough. **Real screens with synthetic data**: every restaurant, supplier and price is invented.

1 Ask every supplier at once

The buyer writes one request for quotation (RFQ) and sends it to all suppliers in one go, by email, in Arabic or English. Sending is always a person's action.

Suppliers answer the way they always do. A reply by email lands in ProcurePilot. A quote that came on WhatsApp, like this photo, is saved and uploaded or forwarded by email: there's no direct WhatsApp connection.

Claims C-16, C-01, C-10

2 Read the quote, line by line

ProcurePilot reads each quotation, Arabic or English, PDF or photo: products, pack sizes, prices, VAT and the validity date.

Every extracted line keeps a link to its page in the original document, with a confidence score. A person reviews it before it is trusted.

Claims C-01, C-02, C-08

3 Check the numbers add up

The total the supplier wrote is checked against the sum of the lines. Anything unclear (a low-confidence price, an unknown currency, a total that doesn't match) goes to a person.

Nobody retypes anything. They only check, then confirm.

Claim C-02. Never state an accuracy figure: it hasn't been measured.

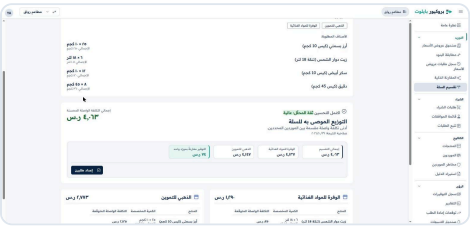

4 Compare fairly

Offers are compared pack for pack (a 25 kg sack against a 10 kg bag, per kilo) with each supplier's delivery fee included, and the scoring is shown.

Here the oil from one supplier ends up EGP 200 cheaper once pack size, VAT and delivery are counted.

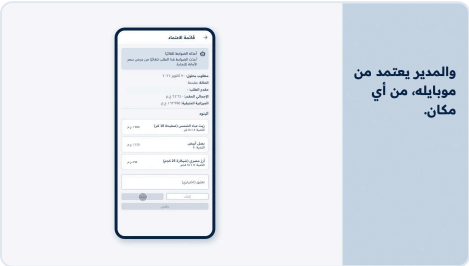

Claim C-03. One currency per comparison.

5 Split the order when it costs less

When one supplier is cheaper on rice and flour and another on oil and sugar, ProcurePilot splits one order between them. In the Saudi demo the split comes to SAR 4,063, which is SAR 74 below the best single supplier.

Claim C-04. Demo figures only.

6 A person approves, from the web or the phone

The branch request reaches the approver with the remaining budget shown. Nothing is ordered before a person approves it. Managers can approve purchase requests from the phone app.

Claims C-05, C-06, C-09. No push notifications yet; purchase orders are web only.

7 Prove the saving

After the order, the saving is calculated against the last price paid or quoted. It counts as **verified** only once someone checks the evidence. Calculated and verified savings are kept apart, so the owner sees only savings someone has checked.

وفّرت فعلاً.. ولا فاكر إنك وفّرت؟

Claim C-07. Never pair it with a real savings figure: none exists yet.

4 · WHERE IT STANDS TODAY

A live product, in an invitation-only pilot

Status	Live as an invitation-only pilot, free for the agreed pilot period. Access is by invitation; people ask at hello@iron-sys.com.
Markets	Egypt first. Saudi Arabia is the first Gulf market (demo workspace and videos ready).
Languages	Arabic and English throughout, including Arabic supplier quotes and Arabic emails to suppliers.
Money	Egyptian pounds with Egypt's VAT, Saudi riyals with Saudi VAT. One currency per comparison.
Where people use it	A web app for buyers and managers, and a phone app for branch managers and approvers.
Who builds it	Iron Systems, an engineering-first software house (iron-sys.com).
Data and AI	The privacy policy says customer data is not used to train AI models. Results are shown for a person to check.
Customers	None on record yet. Every screen, figure and saving shown in marketing is demonstration data.

What it doesn't do (yet)

- No direct WhatsApp connection: quotes from WhatsApp are saved and uploaded, or forwarded by email
- No ERP or Odoo integration
- No push notifications on the phone
- No comparison across currencies (no exchange rates)
- No Kuwaiti, Bahraini or Omani currency end to end
- It never places an order on its own

Questions buyers ask, and our answers

They ask	We answer
"Our suppliers only use WhatsApp."	Keep WhatsApp. Save the PDF or photo and upload it, or forward it by email.
"Will it buy things on its own?"	No. It prepares comparisons and drafts; a person approves every purchase.
"What if it reads a price wrong?"	Every line has a confidence score and a link to its source page. Unclear lines go to review before they are trusted.
"How much will we save?"	We don't know yet. The pilot measures it against your own prices.
"What does it cost?"	Free during the agreed pilot period. (Later pricing is internal: don't quote it.)
"Who sees our supplier prices?"	Pass this one to the product team. The data-separation claim is on hold for public use.

5 · THE RULES

What we can say, and what we never say

Every public sentence about ProcurePilot must match an approved claim in the claims register, which the product team keeps with the limits of each claim. The short version:

Approved claims (use these words)

ID	Claim
C-01	ProcurePilot reads the quotations your suppliers send by email or upload.
C-02	Every extracted line keeps a link to its page in the source document, with a confidence score, and is reviewed before it is trusted.
C-03	Compares offers pack for pack, with each supplier’s delivery fee included, and shows the scoring.
C-04	Splits one order across suppliers when that lowers the total.
C-05	A person on your team approves every purchase. Nothing is ordered before that approval.
C-06	Branch requests reach the approver with the remaining budget shown.
C-07	A saving counts only once someone verifies its evidence.
C-08	Works in Arabic and English, including Arabic supplier quotes.
C-09	Approve purchase requests from your phone.
C-10	Suppliers can keep sending quotes on WhatsApp: save the PDF or photo and upload it, or forward it by email. There’s no direct WhatsApp connection.
C-11	Live as an invitation-only pilot, free for the agreed pilot period.
C-12	Built by Iron Systems.
C-14	Real screens with synthetic data. (Required wherever product screens or demo figures appear.)
C-15	Works in Egyptian pounds and Saudi riyals, with each country’s VAT.
C-16	Send one request for quotation to all your suppliers at once; sending is always a person’s action.
C-17	We don’t use your data to train AI models.

C-13 (data separation) is on hold: don’t use it.

Never

- Savings percentages, money saved, time saved or ROI
- Customer names, logos, testimonials or case studies
- Accuracy figures for reading quotes
- ERP or Odoo integration, push notifications, real-time alerts
- “Secure”, “bank-grade”, “certified”, “compliant”
- “The only Arabic…”, or naming a competitor in public
- The pilot length or the future price

Always

- Label product screens and demo figures “Real screens with synthetic data.”
- Keep the WhatsApp limit in the same sentence as WhatsApp
- Write Egyptian Arabic for Egypt and Gulf Arabic for Saudi Arabia, and get a native check
- Say «توفير» for “saving”, not «وفر»
- Get Yasser’s approval before anything is published

The words we use

Approved headlines, in three voices

English	Egypt (Egyptian Arabic)	Saudi Arabia (Gulf Arabic)
The cheapest quote isn't always the cheapest order.	أرخص عرض سعر مش دايماً أرخص طلبية.	أرخص عرض سعر مو دايم أرخص طلبية.
Did you really save money, or do you just think you did?	وفّرت فعلاً.. ولا فاكر إنك وفّرت؟	وفّرت فعلاً.. ولا تحسب إنك وفّرت؟
Call to action: **Talk to us about a pilot**	كلّمنا عن التجربة	تواصل معنا عن التجربة

The Arabic lines still need a native check per market before they are published.

Supporting sentence

> ProcurePilot reads the quotes your suppliers send, in Arabic or English, compares them on their true landed cost, and counts a saving only once someone on your team verifies it. A person approves every purchase.

Message by person

Person	Message
Purchasing or operations manager	Quotes from WhatsApp, email and PDFs in one place, compared fairly.
Owner or general manager	You approve within budget, and you see only savings someone has verified.
Branch manager	Send requests and get approvals from your phone.

Words to use, and words to avoid

Use	Avoid
quote, quotation, supplier, branch, landed cost, pack for pack, delivery fee	"AI copilot", "plain-language requests"
a person approves, verified saving, calculated saving	"autonomous", "auto-buy", "saves you X%"
demonstration data, real screens with synthetic data	presenting demo figures as results
ProcurePilot (one word, capital P twice); «بروكيور بايلوت» where the product's Arabic copy uses it	"Procure Pilot", "Procurepilot"

Where the audience is

Organic channels only, no paid ads: LinkedIn (owners and operations managers of chains), Facebook groups for F&B owners in Egypt, Instagram Reels and YouTube for the demo videos, and the website. WhatsApp is the team's main direct channel for pilot invitations.

7 · BRAND AT A GLANCE

Two brands: the product and the company

ProcurePilot (the product)

ProcurePilot

بروكيور بايلوت

The Converge logo. Three bars are supplier quotes compared side by side; the teal one, the best quote, keeps going as an arrow: the decision moving forward.

Never recolour the bars, outline the mark or add effects. Don't mirror the mark in Arabic layouts: the arrow means "forward", not reading direction.

Navy #0B2545
text, backgrounds

Teal #12A594
the winning bar, accents

Teal text #0C7A6E
small teal text on white

Mist #C9D6E3
bars on dark

Paper #F4F6F9
page backgrounds

Type: **Readex Pro**, one family for Arabic and Latin (this document uses it). Logo files in every version (English and Arabic, light and dark, app icons) are available on request.

Iron Systems (the company that builds it)

IRON SYSTEMS
AI SOLUTIONS

Powering Businesses with Intelligent Technologies.

Iron Systems is an engineering-first software house: AI solutions, custom software, automation and system integration. ProcurePilot is its own product.

Identity v3.3: **Iron Dark** #0B0F17 carries most of the layout, **Power Orange** #F97316 marks one thing per view, never white text on orange. Type: Archivo Expanded and Inter; Readex Pro for Arabic. Always "Iron Systems", never "Iron System".

Which brand where?

Product material (posts, videos, one-pager, landing page) uses the **ProcurePilot** brand and ends with "Built by Iron Systems". Company material (the Iron Systems LinkedIn page, website, company decks) uses the **Iron Systems** brand and can show ProcurePilot as one of its products.

8 · MORE MATERIAL

What else exists, and what to ask for

This brief is enough to understand ProcurePilot. When you start producing content, ask for the material you need:

Material	What it is
Marketing overview deck	14 slides with speaker notes (PowerPoint and PDF): the same story as this brief, ready to present
Demo videos (v2.5, approved)	Egypt and Saudi Arabia, Arabic and English, wide (2:09) and vertical (1:14), with their scripts; logo sting and end cards
Approved social posts	The November LinkedIn campaign: post copy and images (A-01 to A-06), the carousel and the posting calendar
Product screens	Screenshots and video stills from the demo workspaces (Egypt and Saudi Arabia), web and phone
Logos and brand	ProcurePilot logos in every version, colours, fonts and motion style; Iron Systems logos, covers and brand summary
Product details	Full product profile, user guides for the web and phone apps, flow diagrams, the claims register and decisions log
Sales material	First-customer plan, cold-email sequence, call script, competitor notes and battlecards (internal only)

Open items to know about

- **Wider target:** moving from restaurants to any multi-branch buyer is drafted, not approved. Keep restaurants as the public focus for now.
- **Messaging:** headlines are approved; the supporting sentences for each market are still to write.
- **Competitor notes and battlecards** are for internal use. Never name a competitor in public.
- **Internal numbers** in some documents (pilot length, later price) are not for public use.

Before anything goes public

Check it against page 7, label demo screens, and send it to Yasser for approval. Nothing is published, scheduled or sent without his explicit go.
